

### General:

• This installation & assembly instructions describe the procedure for Optec SwifTerm™ SC connector which applies *for* 250 or 900μm, 2mm and 3mm round fiber cable termination.

Note:

• DO NOT use these instructions to install bow-type drop cable version Optec SwifTerm™ SC

### **Precautions:**

- Never look into the connector end which may have a laser coupled to it. Laser light is not visible & may damage your eyes.

Always wear eye protection when handling optical fibers. Dispose of cut or cleaved fibers properly to avoid skin or eyes damages.

• The product is sensitive to dirt or dust. Unpack the product until ready for installation.

# 1.0 Components & Tools Required

Ple fib for "1" SU "2" FU. ositioning Gaske

Please refer to below fiber cleaver model for lock screwing position: "1" -SUMITOMO FC-6S

FUJIKURA CT-30 "3" -FUJIKURA CT-20

Positioning Gasket

\*(20 sets for 1)

**Assembly Tools Required** 

2.0 Fiber Cable Preparation

1a/ For 2mm or 3mm cable, slide the boot and lock nut onto cable.

1b/ If for 250 or 900 $\mu m$  cable, slide the boot onto cable.

2a/ For 2mm or 3mm cable, remove 35~40mm of cable jacket.

2b/ If for 250 or 900 $\mu$ m cable, strip off around 35mm coating, then jump to point 6.

3/ Cut Kevlar to the length of 4mm.

4/ Strip 900 $\mu$ m primary coating off and leave 4.5~5mm of 900 $\mu$ m buffered fiber.

5/ Split the cable jacket by 6mm with a blade.

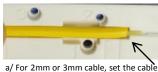

6/ Check the fiber integrity by bending the stripped end slightly at 60  $^{\circ}$  in multidirections.

7/ Clean the stripped fiber with alcohol wipe to remove any debris.

8/ Secure the positioning gasket onto fiber cleaver. Set cable on positioning gasket (refer to next pictures "a" or "b") and cleave.

a/ For 2mm or 3mm cable, set the cable edge at above shown point.

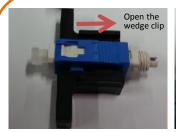

b/ For 250 or 900 $\mu$ m cable, set the fiber edge at above shown point.

# 3.0 Simple Assembly Procedure

1/ The wedge clip is locked with connector body.

2/ Insert the cleaved fiber slowly into the rear of connector until connection is made

3/ Hold the fiber gently. Slide the wedge clip towards front, a click sound will be heard.

4/ Divide Kevlar into 2 equal portions and screw the lock nut onto back of connector to secure Kevlar tightly. Then, slide the boot up. (If for 250 or  $900\mu m$  cable, jump to point 5)

5/ Gently push the boot up and tighten it.

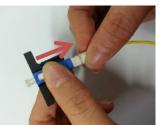

6/ Release wedge clip and termination is

\*\* Keep the ferrule's dust cap on until ready for installation

# 4.0 Disassembly Procedure

1/ Install the wedge clip on. Make sure the housing is aligned with wedge clip.

2/ Slide the wedge clip backwards to unlock the fiber.

3/ Unscrew the boot and remove cable

4/ Take out connector carefully.

\*\* Assembly repeatability is more than 5 times with proper handling
